

GW-001: ONLINE GAMING WEBSITE

DELIVERY REQUIREMENTS

The completed project must be delivered as a fully functional and deployable solution.

The final delivery must include:

- Publicly accessible hosted review URL
- Complete source code repository
- Frontend application source code
- Backend application source code
- Database export files
- Asset package
- Documentation package
- Deployment package
- Environment configuration templates

The hosted review version must remain accessible until project approval and final acceptance.

HOSTED REVIEW REQUIREMENTS

The developer must deploy the project to a temporary hosting environment.

The hosted version must:

- Be publicly accessible without authentication barriers
- Contain all implemented functionality
- Use production build configuration
- Allow complete testing of all features
- Remain active until project acceptance

The delivery must include:

- Frontend URL
 - Backend API URL
 - Admin access credentials if applicable
 - Test user credentials if applicable
-

SOURCE CODE OWNERSHIP TRANSFER

Upon final delivery, full ownership of the project must be transferred.

The developer must provide:

- Complete source code
- Build configuration files
- Database schema
- Deployment configuration
- Asset files
- Documentation files

No proprietary restrictions may be placed on the delivered project.

The client must be able to:

- Modify the codebase
 - Reuse the codebase
 - Deploy the project independently
 - Maintain the project without developer assistance
-

REPOSITORY DELIVERY REQUIREMENTS

Source code must be delivered through:

- Git repository access

OR

- Complete project archive

Repository structure must be maintained and fully functional.

Example Structure

online_gaming_website/

```
├── frontend/
├── backend/
├── database/
├── assets/
├── documentation/
├── deployment/
├── environment/
├── README.md
└── LICENSE.txt
```

DATABASE DELIVERY REQUIREMENTS

The database package must include:

- Database schema export
- Database migration files
- Seed data files if used
- Database setup instructions

Accepted formats:

- .sql
- MongoDB dump
- Migration scripts

The database package must allow recreation of the application environment.

ENVIRONMENT CONFIGURATION REQUIREMENTS

The delivery must include:

- .env.example
- Environment setup guide
- Required API keys list
- External service configuration instructions

No production secrets should be included.

DEPENDENCY MANAGEMENT REQUIREMENTS

The project must include:

Frontend

- package.json
- package-lock.json or equivalent

Backend

- package.json
- package-lock.json or equivalent

All dependencies required to run the application must be documented.

DEPLOYMENT DOCUMENTATION REQUIREMENTS

The deployment guide must include:

- System requirements
- Installation process
- Environment setup
- Database configuration
- Build instructions
- Deployment instructions
- Verification steps
- Troubleshooting guidance

The documentation must allow a third party developer to deploy the application without additional assistance.

FILE NAMING REQUIREMENTS

All project files must follow consistent naming conventions.

Examples

GW-001_Project_Documentation.pdf

GW-001_Installation_Guide.pdf

GW-001_Deployment_Guide.pdf

GW-001_Source_Code.zip

GW-001_Database_Backup.sql

GW-001_Reference_Image.png

File names must:

- Use descriptive names
 - Use underscores instead of spaces
 - Avoid special characters
 - Use consistent capitalization
 - Include version identifiers where applicable
-

FINAL ACCEPTANCE PACKAGE

The final submission must contain:

- Hosted review URL
 - Complete source code
 - Git repository access or source archive
 - Database export package
 - Asset package
 - Documentation package
 - Installation guide
 - Deployment guide
 - User guide
 - API documentation
 - Environment configuration guide
 - Reference materials
 - Build instructions
-

PROJECT ACCEPTANCE CRITERIA

The project will be considered delivered when:

- Hosted version is accessible
- Source code is provided
- Database package is provided
- Documentation package is provided
- Deployment instructions are provided
- Environment configuration is documented
- Ownership transfer requirements are satisfied
- All functionality defined in the project requirements is operational
- All required deliverables are included
